Brought to you by the organizers of Mobile World Congress, the GSMA Marketplace is an online commerce platform that enables buyers and sellers in the mobile industry to connect with each other. These connections enable the buying and selling of all types of products and services.

The GSMA Marketplace enables sellers to create customized storefronts and post product catalogues. Buyers can search for new suppliers or products and can initiate RFX, RFP or RFI. Both buyers and subscription sellers create Connectors to discuss ideas or concepts. Finally, all users can benefit from the Research Centre, which allows detailed analysis of markets, potential partners and even competitors.
